I work as a Graphic Designer and many people contact me for a professional printed artwork. Now i found the software that answers my request, ProPoster is my new tool for generating good artworks of professional quality. I am a A: As vipulakrishna mentioned this is not a poster, and also is not a software which makes posters. I am afraid you might get more confused with the terms used. There is no "layers" and no "size in CM". So to answer your question: The poster will look big after printing, but will not be big in "pixels" Yes. But most printers will not print the same quality as digital images. It is common to get an overall blurry look in the poster. Yes. They will not print the same size in "pixels" as the actual digital image. Some people may think your image is blurry, because they assume it is large, but in reality it will look smaller. That is the digital file size. In the poster it will look bigger. That is the physical size of the poster. If a poster was made from a digital image that is 5 in width, it would be 5 inches wide. The only question remaining is whether your design quality is good. If you can afford it, I recommend you using a professional printer. A: No, it is not a poster. It is software that allows you to make posters. You can use it to make posters starting with a

digital photo taken with your personal camera or found on the Internet. You can use it to make posters of any dimensions. You can use it to make big posters starting from any image stored onto the PC or acquired on the spot form a connected TWAIN device. You can use it to make posters of any size. There are many predefined templates. You can use it to edit digital photos. You can save a digital photo. You can save a color image. You can save a black-and-white image. You can save a grayscale image. You can save a RGB image. You can save a CMYK image. You can save a B/W photo. You can save a CMYK photo. You can save a RGB photo.
