In addition to its desktop version, AutoCAD offers (or has offered) its own industry-specific drawing standards, such as, for example, IEC 61010-1 for industrial design, the 15- and 18-pin specification for industrial control electronics, the IEC 60364-1 standard for power electronics, and the ISO 14000-2 standard for general mechanical engineering. In November 2014, Autodesk announced a global licensing agreement with W3C to support the W3C Web Services Description Language (WSDL) to assist AutoCAD developers to integrate WSDL-based web services into their applications. 2D modeling A number of tools are available for creating 2D geometric shapes such as ellipses and rectangles, including the MTrig and Pen tools. The use of the MTrig tool is easily done by specifying a center point and radius, which when performed in one direction results in an ellipse. When MTrig is used in the opposite direction it can be used to create a rectangle, using a three point method. The best way to create rectangles is to use the shortcut (CTRL+1) with the MTrig tool, which creates a rectangle with the previously defined center point and defined radii. The Pen tool allows a user to draw a line by simply connecting two points. The general method for creating a line is to perform a series of short cuts (CTRL+2) to create points and then connecting the points to create a line. The line and polyline tools work in much the same way. The user can draw a line by connecting two or more points or by using the shortcut (CTRL+4) and selecting one point and then performing the keyboard shortcut (CTRL+F) to create a polyline. The user can draw a polyline by connecting a series of points (or vertices) and then by using the shortcut (CTRL+4) and selecting the vertices. 2D printing 3D printing in the AutoCAD environment has been available since AutoCAD 2012, including 3D Modeling. AutoCAD 2018 introduced the ability to export "2D-PDF" or other 2D profiles to print from 3D-PDF files or model created in 3D. Another 2D extension is the ability to create a shape

with rounded edges and in this way simulate a "staircase" effect. The AutoCAD 2018 extension of the Staircase Shape is a very useful tool for designing warehouses, and other areas of architecture. In AutoCAD there is a 3D visual effect called the look up effect. The 3D Warehouse The 3D Warehouse is part of AutoCAD as an application. It allows the user to view and edit 3D models. It is also possible to browse 3D data from Autodesk Exchange Apps. 3D Warehouse also works with AutoCAD Architecture, Architectural Design, AutoCAD Electrical, and AutoCAD MEP. In addition, an option to turn the 3D Warehouse off is a1d647c40b

What's New In?

Feedback on paper works best if your changes are small and likely made in the same workflow as your designs. The ability to insert a drawing on an existing drawing is enhanced. You can create a duplicate of an existing

drawing, or create a template with your changes. (video: 1:22 min.) Autodesk Revit: Revit is updated to reflect modern design practices and open systems. See the "Revit 3D: A New Generation" webinar. More options are available for navigation, such as the Spatial Navigation (anatomy browser) and a 3D Navigator. Revit Blocks are now a separate software product to simplify workflow. (video: 2:13 min.) Revit CAM is also enhanced with new features. (video: 1:06 min.) Raster graphics capabilities (including creating a raster image from a 2D vector image) is added. The ability to convert a drawing into a Raster (bitmap) image is added. (video: 2:05 min.) AutoCAD Architectural: 3D-enabled crosshairs are added to the project window. All commands that generate linetypes are revamped. They are now easier to use, and more accessible. You can view existing linetypes by holding down the 'Shift' key. You can drag the Linetype manager to new areas of your drawing. 3D Layers are now optional on all surfaces. This gives you more flexibility in designing with 3D views. Obtain layers from existing drawings. (video: 2:39 min.) Use the new 'Autolayer' command. New Linetype commands are added. 'Autoclass' and 'Autolayer' is added to the command palette. Canvas tools can now be assigned to the AutoClasS menu. When using the Arc or the Arc/D circle, an auto-update dialog for the radius is added to the 'Cancel' dialog. The 'Flow' command can now be used to save layers with sublayers. Obtain layers from existing drawings. (video: 2:08 min.) Revit Structure 2010 Revit Structure 2010 is an enhanced version of our building information modeling (BIM) software that
