Historically, the majority of CAD users have been professional architects and engineers who need to produce accurate drawings for use in construction, industrial design, and manufacturing. Due to the computational intensity of AutoCAD's primary feature set, it is a common target for attack for evildoers and malicious malware authors. Examples include ransomware, ransomware lock screens, and ransomware-type malware. AutoCAD also includes many customization and cloning tools that allow users to automate drawing tasks.

AutoCAD Architecture AutoCAD has two main components: the AutoCAD system software and the AutoCAD document. The AutoCAD system software is the application used to create, modify, and view AutoCAD drawings. The AutoCAD document is the file format in which AutoCAD saves and opens drawings. Fig. 1.

AutoCAD program components AutoCAD Architecture: The AutoCAD System Software The AutoCAD system software includes the AutoCAD program and the AutoCAD database. The AutoCAD program provides the user interface for creating and viewing AutoCAD drawings. The AutoCAD database is a key AutoCAD feature that allows users to store design information, such as information about object, geometric, and dimension parameters. AutoCAD Architecture: The AutoCAD Document The AutoCAD document is a vector

graphic file format. Vector graphic files (like AutoCAD documents) are a type of image file format that can be defined by, and contain, one or more vector paths.

The AutoCAD document is the primary file format that AutoCAD uses to store and display the drawing. AutoCAD creates a new drawing in the drawing's default or template drawing space. The drawing's default or template drawing space is used as a canvas on which all other drawings are created and viewed.

Each drawing is represented by one or more AutoCAD documents. AutoCAD drawing spaces There are six drawing spaces available in the system software, including two default drawing spaces and four template drawing spaces. The default drawing spaces are the architectural drawing space and the engineering drawing space. The architectural drawing space is designed for architectural use and is usually used by architects, engineers, interior designers, etc. The engineering drawing space is used to display engineering drawings and is usually used by CAD technicians, engineers, etc. AutoCAD drawing spaces A template is a type of document that includes various AutoCAD drawing space settings
