pinnacle studio includes a rather simple timeline scrubber. you can navigate the scrubber with the left and right arrows on your keyboard, or by using your mouse's scroll wheel. you can also zoom in and out using the +/- keys. the scrubber does not offer a scrubbing tool, however, nor does it include a timeline to review clips before clicking to cut them. it's possible to use the timeline, but it's a bit clumsy to open and close clips. you can trim clips by dragging them, but you can't edit them directly, so you have to open them in a new project first. pinnacle studio includes an easily accessible trimming tool. you can choose a range by dragging the ends of the range on the timeline, or by setting the left and right ends with the slider controls. after trimming clips, you can drag the selection onto another clip to add the area to the clip. the program can perform basic editing tasks, such as cutting and pasting clips, but you can't do any trimming or effects work. this is a big step down from some of the competition. pinnacle studio comes with the ability to add motion paths to clips in the timeline, but you must import clips with paths using the smart paths command. it's not an easy process, however. you can get to the smart paths window by selecting the filmstrip icon in the timeline, then selecting the add paths tab. pinnacle studio includes an audio-only mixer, but it doesn't offer much flexibility. you can add a click track, mix down the audio tracks individually, or group them together in a stereo track. you can't, however, mix multiple tracks without a click track. as with the timeline, the controls for the mixer are buried in the toolbar. 5ec8ef588b
